

Text Generation Using Recurrent Neural Networks

Yousef Razeghi

November 27, 2018

1 ABSTRACT

In this project I was supposed to use a recurrent neural network and train that to learn the sequence of characters from an arbitrary text book and then regenerate words in a way that they make meaningful terms and avoid syntax mistakes as much as possible. to achieve this goal I tried to train a multilayer Long Short Term Memory(LSTM) neural network which is a popular architecture for kind of task which the data comes in the form sequence and also because of their high dimensional hidden state which makes it available for them to remember and process past information.

2 INTRODUCTION

In order to understand the structure and the dynamics of LSTM networks I reviewed an article [1] and experiments done before to get some inspiration and get familiar with data pre-processing techniques which would be useful to optimize the output of network, as I learned a recurrent neural network is a form of fully connected neural networks in a way that feeding sequential data is enabled so when we talk about sequential that means the data would be a kind of time series and we have time steps that in each one the RNN takes an input, updates it's state and makes a prediction. so first of all the raw text data should get in form of sequences and the converted to proper scalar values that can represent the characters, the result of these processes could be feed into the network to train and the making predictions.

2.1 PROBLEM AND DATASET INFORMATION

Since the related data of this task was in raw form i mean there were not any particular train and test set like previous tasks which were classification problems, I should some how process the data and prepare the training set consisting of data points and labels. also another challenge of this project which makes it more interesting is that for each data point there is not any certain class which could get categorized, any character could be the following next character of any characters and here we should get some help from probabilistic to guess the corresponding class. I considered the e-book "Critique of Pure Reason Book by Immanuel Kant" for this experiment as a data source.

3 METHODS

3.1 PERFORMANCE OPTIMIZATION

- Hidden Layers
 - Although increasing Increasing number of hidden layer neurons and number of layers affects the computational expense of model but this improves the accuracy of model in terms of reducing syntax and semantic errors in text.
- Sampling and Scale Factor
 - After training the model on the dataset the model should be able to generate characters related to the feed sequence, to make this happen i used a sampling method, this method simply takes the prediction of the model which is vector of size (1x28) consisting of positive and negative float numbers that indicate the

possibility of each character to be the correct following character for the feed sequence, this vector goes through the sampling function and the output is a one-hot vector of size(1x28) which indicates the following character for feed sequence. the important factor here is the scale factor that i used for this function, scale factor has a value between 0 and 1 and the bigger scale factor increases the diversity of words generated by model but at the same time increases the risk of syntax error, the smaller values makes the model more conservative regarding the generated words which results to frequently repeat of same words.

3:    $predicted \leftarrow (exp_{predicted} \div sum(exp_{predicted}))$ 
4:    $probabilities \leftarrow random\_choose(multinomial(1, predicted, 1))$ 
5:   return(probabilities)
6: end procedure

```

- Text normalization
 - Each book in the data source has many punctuation symbols which are so less frequent with respect to the alphabet letters used in text at the same time the order and selection of punctuation symbols follow exclusive rules which would be difficult for model to understand correctly, so the main reason here is that since there are fewer samples of punctuations in the text file to feed into model then we can omit them to get better results.
- Seed making
 - Since the test on the model would get done by arbitrary keywords, I defined a method to search for keyword in the text file and find the all occurrences then randomly choose one and make a sequence of length that network was trained on, choosing the occurrence index randomly causes to select different sequences each time and as result the network generates different text for same keyword each time and makes the model more generative.

```

sequence_list=[]
while True:
    desired_keyword=input('Enter a keyword to generate the text:')
    match_cases=[m.start() for m in re.finditer(desired_keyword,tx)]
    if (len(match_cases)<=0):
        print("No match case found for %s in the book, enter another keyword . . ."%(desired_keyword))
    else:
        random_index=list(range(0,len(match_cases)-1))
        random.shuffle(random_index)
        if (len(random_index)>5):
            random_ind=random_index[0:4]
            #random_ind=random_index.pop()
        else:
            random_ind=random_index
        for t in random_ind:
            random_sequence=tx[match_cases[t]:(match_cases[t]+(sequence_length))]
            sequence_list.append(random_sequence)

3.2 COMPUTATIONAL GRAPH

I used the tensorboard to visualize the model's computational graph, this tool comes together with tensorflow when installing tensorflow from pip, by using the tensorflow name scopes the model could get visualized at any level of abstraction, Below you can see my computational graph which includes a multi-layer LSTM that consists of three basic LSTM cells, each cell have 512 neurons.

raskolnikov stopped her and went towards the efforts but performing such a right to do without that... too much brobbing and everything in drawing ideals we occupiously right about it the simply walking to answer the talkation of misuas were assure and contemptuous roubles for educated trashes for instance can but i must take thinks of the project gutenbergm electronic works. promet something brother standing all this work or any other way almost watching him. and that she is reading family drunk and i felt very owing to intrash for yourself there will be angry of talking of light and indeed of sinivern the fact that she is awfully struck upstages of any project gutenbergm electronic works harried he had her own vices he had plenty plays and day and i should think my life is it no need to take it to work and donations right eyes all abling at eightest evidence now that your friendship was to her well live not so stining like an atched to do with these project gutenbergm electronic works. perhaps i alwed you raskolnikov throw but he had made an offict and practicalous declared so that i have murdered before he he he for some unknown reason to be ablempt. dounia s innocence and donations received and moved to live even in the project gutenbergm electronic works. prometions foo it s not for him. but she was torturably diserted before the project gutenbergm electronic works if you findsleep that see that you are a man of grief but what do you call the police official support immense late copy in lie a student is common to the window and the new comers had been lived ... you will see i lived that and what creares to arrive exhan musiness to donacious and service. what if i am adviolent. cuss the project gutenbergm electronic works. project gutenbergm electronic works. promet something brother silence but for the last time raskolnikov at the a burding project gutenbergm electronic works. prometing for my own surprise perfectly conceived. sonia saw that people may be regul ring was also dressed ... i ll come in all i wanted to go... to that potconess are three project gutenbergm electronic works. project gutenbergm electronic works harried he to provide notice carrying out not the revolver came to provide and distribute is providing capital explanation. trembering for her is pretty little conversation or perion you see what the new life whenterm. raskolnikov asked aloud to the other. the older came to ane sent minutes later the latter was beginning to come with your friending thing project gutenbergm electronic works harried he took them every day at the project gutenbergm electronic works if you finds such a mother s mine off but he had not uttered in a sudden guffar. there are a fortotice. in the new people should have taken his way home to provide notice the fory. was it providing cine cried death three years about read immious to his man s condescending place fool was a continual convictions scarcely mutter of them. that s the use of going into another embrodis while is one thing began expression from which he had no concerement you may outting to pract your mare for ten pins for it stupid but he had not ut the use of that this he pour because he was talking of special interest under the business s death. i provided him worried and doubter for your surprise perficultiments and happy noboding civiling the quarrel before your arrangement thilignable person but raskolnikov asked almost at one short in thosere delirious. what you are such a month are i learnt nowarrage the food of a sudden and was shoing viluing for the last time raskolnikov answered to a store of this agreement shall be different thing about food. i shout i must do without i without a crime. you ve been distracted up by blowser sonia was glad to enter into the deficute likely entirely new copper. he was so consensible that seeing that.... that s egory man is a common i had spend to work forgive lesson. raskolnikov received anyone the bod is when were full of project gutenbergm electronic works. project gutenbergm electronic works. prometions for instance can be soon office. i maintained this last determines were continually eyes. these cherising the individing this was providing the project gutenbergm electronic works. project gutenbergm electronic works in crowd picks forgive later he had been listening constant so that the furust of despairing for man you had been stored the evenity was providing by delirious or me and man all that a signfication or eridilina the new minute they conceded no ure the revolver came to project gutenbergm electronic works. perhaps i am sure and har the honour are ill and difficuure battion . .e. . i ve been disgrace us in any not that you are are ill just wanting for it it in any way we well go positive i given up and you then even now dream. nothing account the work fought away from him the project gutenbergm electronic works harried he thought of survice on such a rubbing cution he began at the time... don t you ring m

5 CONCLUSION

Although implementing multi-layer LSTM was challenging since there were some bugs related to tensorflow library which caused to several dimension exceptions during training but finally I found that to implement multilayer LSTM we should strictly consider drop out wrapper to avoid dimension exceptions, increasing layers ,neurons and training epochs has a direct effect on result and also on computational expense so having some information about the type and severity of data in terms of how difficult is that to be learned makes it easy to catch up the appropriate network architecture and hyper parameters.length of sequences which would feed into model also plays an important role regarding accuracy of generated terms so I suggest to begin from one and increase to find the best boundary which satisfies both accuracy and having lower training time.
